Webmail is SPU's email system. Access your email from any location when you have access to the internet! Go to spu.edu/webmail and log in with your SPU Username and Password. You may also choose to configure an email client (such as Outlook or Mail), instead of using the web browser version. Instructions on how to configure an email client may be found on our [Email Client Configuration](#) page.

By logging into Webmail, you also gain access to [OneDrive for Business](#) as well as other features provided through our [Microsoft Office 365 for Education](#) subscription.

Pop-up blockers

Some Internet browsers include pop-up blockers that may prevent Webmail from displaying messages correctly. Most pop-up blockers can be disabled. See your browser's blocker documentation or help files for details.
